SUMMARY

Software Engineer with a Master's in Computer Science and 3+ years building and optimizing backend systems for enterprise SaaS. Strongest in Java, Spring Boot, REST APIs, SQL, and React, with hands-on AWS (S3, Glacier) and ownership of a native C#/.NET client. With a record of improving performance, ensuring reliability, and hardening security in fast-paced, cross-functional teams.

EDUCATION

Master of Science in Computer Science

University of Southern California, Los Angeles, CA

Aug 2023 – May 2025

Bachelor of Science in Computer Science & Engineering

Amrita Vishwa Vidyapeetham, Bengaluru, India

July 2018 – June 2022

PROFESSIONAL EXPERIENCE

Veeva Systems

Associate Software Engineer

San Francisco Bay Area, USA

June 2025 – Present

Technologies: Java, Spring Boot, C#/.NET, AWS (S3, Glacier), REST APIs, JMS/Message Queues, SQL, React.js

- Delivered the **Vault CRM** ↔ **PromoMats** content integration by programmatically packaging custom source files into **CrossLinks**, so CLM presentations and rich media transfer with full fidelity, **eliminating manual file hand-offs**.
- Reduced document batch-API database connection calls by **79%** (**133 to 28** per batch) by profiling hot paths and eliminating a **1:1** query-to-connection ratio, stabilizing threads generating **5,000+** excess requests.
- Eliminated **4+ hour CrossLinks** syncs and drained an **80,000+** message backlog blocking the **Vault CRM** integration, by fixing Tomcat's silent dropping of non-ASCII HTTP headers to restore source-file fidelity for international filenames.
- Unblocked recovery of **100–450 GB** files from **AWS Glacier** by replacing S3 single-op copy (capped at **5 GiB**) with a multipart pipeline supporting files up to **500 GB**, hardening the weekly storage-validation job against crashes.
- Sole engineer of **Vault File Manager**, a native Windows **C#/.NET** client, resolved P2 production issues including **39,000+** file upload resiliency and remediated a phantom **DLL-hijacking** vulnerability across **30+** libraries.

Veeva Systems

Software Engineer Intern

California, USA

January 2025 – May 2025

Technologies: Java, Spring Boot, REST APIs, AWS, SQL, React.js, JUnit, Application Security

- Designed and shipped **Export Documents**, a bulk report action that exports the exact document versions across multiple interfaces in one asynchronous job with configurable renditions, metadata, and audit trails, cutting manual effort by nearly **90%** and **tripling** export throughput.
- Hardened **24+** document endpoints against **CSRF** (Cross-Site Request Forgery) across **17** stories by enforcing nonce-token validation through a shared utility, serving as the Documents-side lead coordinating endpoint ownership across **8+** platform and application teams.
- Migrated direct **audit-table** SQL access onto the audit-client service layer (**DocumentAuditClient** / **AuditService**), reorganizing **4** core classes and **5** analytics queries to keep document reporting functional through the audit-table split and Glacier archival.

Veeva Systems

Software Engineer Intern

San Francisco Bay Area, USA

May 2024 – August 2024

Technologies: Java, Spring Boot, AWS (Glacier, S3), REST APIs, Message Queue, SQL, React.js

- Architected and delivered a full-stack, automated document restoration system to recover critical files from **AWS Glacier Deep Archive**, replacing a manual CLI process.
- Built a **React UI**, Java-based **REST endpoints**, a message queue, and a **stateful SQL** database to manage complex, multi-day migration workflows, eliminating all manual operational intervention.
- Designed and implemented the Vault Admin "**File Staging Repoint**" feature, enabling cross-pod **asynchronous file-staging relinks** and eliminating a major manual support workflow.

AppViewX

Software Engineer

Bengaluru, India

August 2022 – July 2023

Technologies: Java, Spring Boot, React.js, MongoDB, Kubernetes, Microservices, REST APIs, PKI/Certificate Lifecycle Management

- Prevented possible network outage for over **100 customers** by upgrading code signing certificate issuance from obsolete browser key generation to a **hardware security module**, complying with industry standards.
- Optimized discovery of certificates in the product which boosted revenue from a specific enterprise customer by **15%** by enabling the keystore module.
- Solved a major business use case for **key pair rotation** on renewal of certificates, adding remaining days of validity to the new certificate and reducing customer expenditure.
- Successfully migrated DigiCert certificate types to a new nomenclature in **O(1) Time Complexity** utilizing efficient query framing and bulk database updates, saving customer cloud operational charges.

AppViewX

R & D Software Development Intern

Bengaluru, India

February 2022 – August 2022

Technologies: Java, Spring Boot, jQuery, React.js, MongoDB, Microservices, RBAC, PKI/Certificate Lifecycle Management

- Implemented **Role Based Access Control (RBAC)** for OpenTrust CA certificate profiles, replacing blanket access with per-role permissions.
- Built a drill-down **PKI dashboard** showing monitored certificates and keys, root CAs, and revoked or renewed certificates in one view, replacing manual lookups.
- Extended expiry alerting from leaf certificates to **root and intermediate certificates**, closing a chain-wide visibility gap.
- Audited and refactored the certificate management UI against **XSS**, sanitizing user-supplied input across the affected forms.

PROJECTS

- Raft Consensus Algorithm:** Built a complete C++ implementation of the Raft consensus algorithm, engineering fault-tolerant leader election and log replication phases using gRPC for distributed state consistency. **Tech:** C++, gRPC.
- Gossip Scope:** Developed an interactive visualization tool to simulate the Gossip distributed protocol, featuring real-time graphical propagation, node failure testing, and interactive parameter controls. **Tech:** React.js, D3.js, JavaScript.
- IntelliProc:** Built a Dual Camera Proctoring System for remote exams, leveraging mobile and webcam integration to ensure academic integrity and prevent malpractice. **Tech:** NodeJS, React.
- SkillBridge:** Developed an AI-powered career coach that analyzes resumes against job descriptions to identify skill gaps, generate personalized course recommendations, and provide AI-driven interview prep. **Tech:** FastAPI, Next.js, MongoDB, Gemini.

TECHNICAL SKILLS

Languages: Java, C#, Python, JavaScript, C++, SQL

Backend & Distributed Systems: Spring Boot, .NET, Node.js, REST APIs, gRPC, Microservices, System Design, JMS, Concurrency

Cloud & DevOps: AWS (S3, Glacier), Docker, Kubernetes, Jenkins, CI/CD, Git, Linux

Databases & Web: MySQL, MongoDB, React, Angular, HTML5, CSS3, jQuery, JSON
